

Free Executive Seminar!
“GIS: More Than Just a Map”

**Monday, March 19th, 2007 from 1:30 to 3:00
at Towson University**

Geographic Information Systems (GIS) technology has become pervasive in many aspects of government. Much more than simply a mapping tool, **GIS saves time and money** because it is an *information system* that supports:

- **Emergency management and public safety**
- **Planning**
- **Operations and maintenance**
- **Natural resource protection**
- **Health and human services**
- **Citizen awareness**
- **Asset management**
- **Many others...**

Join us for this special gathering of policy and strategic leaders from state and local government in an ongoing discussion of the need for coordinated GIS in Maryland. This special 90 minute seminar will highlight GIS activities across the state and provide information on current efforts to better coordinate GIS across both jurisdictional and functional boundaries at all levels of government.

This seminar is part of the 20th Annual Towson University Geographic Information Systems (TUgis) Conference, which will be held March 19-20, 2007 at Towson University. TUgis 2007 will emphasize information sharing, or technology transfer, by anyone currently using GIS and anyone considering using GIS. The theme for TUgis 2007 is “Geocollaboration: Collaborative Methods for Working with Geospatial Data.” For more information about the conference, visit <http://tugis.towson.edu>.

**REGISTRATION IS FREE
FOR EXECUTIVE LEADERS WITHIN STATE AND LOCAL GOVERNMENT**

PLEASE RSVP BY MARCH 9th, 2007 to
Gloria Yeatman, Towson University Center for GIS
